OBJECTIVE

Full-stack engineer who builds and ships production AI products end-to-end.

EXPERIENCE

Systems Engineer | regenold via Plainview Technologies | *London, UK* 09/2026 – Present
- Leading the cloud buildout to modernize regenold's operations and bring secure AI applications and workflows to their client work, designed to support GDPR, GxP, ISO 27001, EU Data Act, and EU AI Act requirements.
- Expanding their existing Entra setup for identity to support secure cloud data access and downstream applications.
- Building with Azure Functions, Microsoft Graph API (delegated permissions), Microsoft 365, Foundry IQ, and Bicep IaC.

Founding Engineer | Acuity Technologies via Plainview Technologies | *Cambridge, UK* 02/2026 – 09/2026
- First engineer, working under the scientific direction of David Rubinsztein, in day-to-day collaboration with a couple of postdocs from his lab. Translated researcher ideas into tools and workflows that the postdocs could use to further aid discovery.
- Delivered bioinformatic workflows for target discovery, including large-scale knowledge extraction across hundreds of thousands of scientific manuscripts.
- Built the stack: TanStack, Postgres, Logfire, Anthropic, Restate Durable Execution.

Software Engineer (Full Stack) | Centre for Health Informatics | *Calgary, Alberta* 01/2024 – 02/2026
- Built software platforms that helped anchor a successful $1M+ CAD in grants; contributed to and managed the technical budgets.
- Created recens.app, a qualitative research platform for AI-assisted policy document review with a strong design emphasis on human-in-the-loop. Created an eval and observed reduced man-hours by 60% compared to legacy platforms, saving an estimated $8–11K CAD per review. Self-hosted GPUs for document OCR and LLM hosting, PlanetScale DB, Railway Hosting.
- Developed and maintained atlas.mh2c.org, a global refugee health app. Frontend developed with Remix and React (TypeScript), hosted on Azure. Postgres backend.
- Interfaced directly with non-technical teams (independent research teams, World Health Organization) to build applications from ideation to deployment. Orchestrated external technical consultants to develop mh2c.org. Hosted on Cloudflare.

Quantitative Developer | Stealth | *Remote* 05/2022 – 10/2022
- Cleaned and preprocessed hundreds of millions of rows of data using pandas (Python).
- Back-tested different options writing strategies to mitigate platform risk.

Junior Data Analyst | Global Predictions | *San Francisco* 06/2021 – 01/2022
- Programmatic data analysis of a massive set of macroeconomic features using Python.

Undergraduate Researcher | University of Calgary | *Calgary, Alberta* 05/2021 – 08/2021
- Analyzed 3D robotics data from the KINARM exoskeleton to research the impact of vision on proprioception recovery in stroke patients. Analysis in MATLAB and Python.

EDUCATION

Queen's University, BASc Applied Mathematics Engineering
Major: Applied Mathematics | Minor: Computing

ACTIVITIES

Personal Projects - see all at vaughan.love 2019 – Present

- barter.computer - Live agent negotiation protocol with TLSNotary price proofs. **Nov 2026**
- Gentleman's Agreement - Winning team, Hacking for Agentic Finance: AI settles USDC wagers. **Nov 2024**
- PromptBreeder - 190 GitHub stars; DeepMind implementation used by Cambridge researchers. **Oct 2023**

Breakpoint Global Fellow 11/2021

- Developed subscription infrastructure for the Solana developer ecosystem and was sponsored to attend breakpoint 2021.

Tech Lead 08/2020 – 03/2021

- Developed NOTIFAI, an AI notification manager while in QMIND. Presented nationally at CUCAI.

SKILLS & ABILITIES

Languages: Python, TypeScript, JavaScript, Rust | **Frameworks:** React, TanStack, Remix, Flask, FastAPI, Pydantic
Infrastructure & AI/ML: Docker, AWS, Azure, Azure Functions, Microsoft Entra, Microsoft 365, Microsoft Graph API, Foundry IQ, Bicep, Cloudflare, Railway, PlanetScale, Postgres, Redis, Restate, Logfire, vLLM, Anthropic API, language models, OCR, self-hosted GPU inference, pgvector
